Abstract: The purpose of this study is to explore the relationship between the efficiency of educational funding use and the quality of education. The study aims to provide guidance on the allocation of educational resources through the analysis of the effects of educational decision-makers and educational institutions. Using the literature review and empirical research methods, we collected the relevant research literature and education funding data, and conducted statistical analysis and comparison. The research results show that there is a close relationship between the effective use of education funds and the quality of education. Making full use of educational funds, rationally allocating resources, and providing high-quality educational facilities and teaching resources can promote the development of students' learning results, knowledge level and skills^[1]. In addition, the effective use of education funding also includes investment in teacher training and development, curriculum reform and education management, which also have a positive impact on the quality of education. Therefore, it is suggested that educational policy makers and managers should pay attention to the effective use of educational funds, strengthen the planning and management of educational resources, and improve the efficiency and quality assurance system of institutions. Only in the case of the positive interaction between the use efficiency of educational funds and educational quality, the goal of sustainable development and educational equity can be achieved.

Keywords: education funds; use efficiency; education quality

1. Introduction

The relationship between the use benefit of educational funds and the quality of education is a topic of much concern. With the development of social economy and people's attention to education, the state's investment in education funds has also increased year by year. However, the investment of educational funds may not directly affect the improvement of educational quality, therefore, it is of great practical significance to study the relationship between the use benefit of educational funds and educational quality.

By studying the relationship between the use benefit of educational funds and the quality of education, it can help the government and relevant departments to allocate and manage educational funds more scientifically. Education funds are limited resources. How to allocate these resources and improve the efficiency of education is an urgent problem to be solved^[2].

The use benefit of educational funds refers to the educational objectives and results obtained through scientific and reasonable use methods and measures under the premise of educational funds input. The use benefit of educational funds is one of the important indicators to evaluate educational quality, which is related to the rational allocation of educational resources and the realization degree of educational goals. The research on the use efficiency of educational funds mainly includes the following aspects: the investment mode and proportion of educational funds: conducts the research on the source and use of educational funds, and analyzes the influence of different investment modes and proportion on the use efficiency of educational funds. For example, by comparing the proportion of public grants and individual payments, we can explore the difference in the use efficiency of education funds under different proportions. Allocation and Management of Education Funds: Explore the Distribution Model, Management Mechanism, and Supervision and Restriction Mechanism of Education Funds. Explore the impact of different allocation and management models on the efficiency

of educational fund utilization. Through the above research content, the relationship between the use efficiency of education funds and education quality can be deeply discussed, so as to provide scientific reference basis for educational decision makers, so as to improve the use efficiency of education funds and promote the improvement of education quality^[3].

2. The use benefit of educational funds

The source and allocation of educational funds is one of the key factors of the use benefit of educational funds. The sources of education funds mainly include government appropriation, education taxes and fees, donations and tuition fees, while the allocation of education funds involves the decision-making and implementation process of all governments, schools and families at all levels. The source and distribution determine the scale and reasonable utilization degree of educational funds, and then affect the use efficiency of educational funds^[4].

The allocation of educational funds needs to consider many factors, including educational needs, regional differences and social equity. First, the allocation of educational funds should be reasonably planned according to the actual situation of educational needs to ensure that resources give priority to meet the needs of basic education and vulnerable groups. Secondly, regional differences are an important consideration for the allocation of educational funds. There are differences in the economic conditions and educational foundation of developed areas and less developed areas, so the allocation of educational funds should be appropriately tilted. Finally, social equity is an important principle in the allocation of educational funds. The excessive concentration and unfair distribution of educational resources should be avoided to ensure that every student enjoys equal educational opportunities.

The source and distribution of educational funds is an important basis for the use benefits of educational funds. Only on the basis of reasonable sources and distribution can educational funds give full play to the maximum benefits, improve the quality of education and realize educational equity^[5].

3. Definition and assessment of educational quality

The concept and dimensions of the quality of education can be explored from several perspectives. First, the quality of education can be understood as the degree of realization of educational goals, that is, the level of knowledge, skills and ability of students in the learning process. Secondly, the quality of education can also include students' attitudes, values and personality development. In addition, the quality of education also involves the teachers' ability and teaching effect, including the scientificity and flexibility of teaching methods, and the full use of educational resources^[6]. In addition, the quality of education is also closely related to the management and operation of school institutions, the participation of parents and the social environment. Therefore, the evaluation of education quality should be comprehensively considered from multiple dimensions, in order to comprehensively understand the advantages and disadvantages of education quality.

4. The relationship between the use benefit of educational funds and education quality

4.1. The impact of the use benefit of educational funds on the quality of education

The influence of the use benefit of educational funds on the quality of education means that the reasonable use of educational funds can directly or indirectly affect the improvement or decline of educational quality. In this part, we will analyze the impact of the use of educational funds on the quality of education, and explain how to improve the quality of education through the reasonable use of education funds. First of all, the meaning and importance of the benefit of the use of educational funds will be discussed, and the key role of the benefit of the use of educational funds on the quality of education will be emphasized. Then, some effective strategies and methods for the use of educational funds will be introduced, such as raising teachers' salaries, improving school facilities, and introducing advanced educational technology. Further, it will discuss the impact of the use benefit of educational funds on students' learning results and school management, and how to improve students' learning results and improve the school management level by optimizing the use of educational funds. Finally, it will summarize the importance of the use benefit of education funds to the quality of education, and suggestions will be put forward, such as strengthening the supervision and evaluation mechanism of education funds, improving the transparency and fairness of the use of education funds, so as to further

promote the improvement of education quality^[7].

4.2. Requirements for the education quality on the efficiency of the use of educational funds

The improvement of education quality requires the reasonable allocation of education funds. In the process of improving education quality, it is necessary to allocate and use education funds reasonably. Priority should be given to ensuring the construction of educational infrastructure, improving the teaching environment, improving the efficiency of the allocation of educational resources, ensuring that the use of educational funds can really play a role and improve the quality of education. Improving the quality of education requires increased investment in teacher training and development. Teachers are the core elements of education quality, and their professional ability and teaching level directly affect the quality of education. Therefore, increasing the investment in teacher training is the key to improve the quality of education^[8]. By providing more training opportunities and support, promote teachers' professional development and improve their teaching ability, and thus improve the quality of education. The improvement of education quality requires the strengthening of school management and supervision. School is an important link of education quality, and strengthening school management and supervision is the guarantee of improving the quality of education. Through enhancing the school management system and standards, intensifying school supervision and evaluation, we aim to guarantee that the utilization of educational funds aligns with regulations, thereby genuinely enhancing the quality of education. The improvement of education quality needs to focus on innovation and reform. Innovation and reform are the important ways to improve the quality of education. In the use of educational funds, we should pay attention to the innovation of educational methods and methods, promote the reform of education and teaching, and improve the quality of education. At the same time, we should also strengthen the investment in educational research, promote the innovation of educational theory and the improvement of practice, and constantly improve the quality of education.

The requirements of education quality on the use efficiency of education funds involve reasonable allocation of education funds, increasing the investment in teacher training and development, strengthening school management and supervision, paying attention to innovation and reform, and establishing effective incentive mechanism. Only on the basis of these requirements, the use efficiency of educational funds can be truly reflected in the improvement of education quality.

5. Summary of empirical studies at home and abroad

5.1. Overview of the research on the use benefit of educational funds at home and abroad

At home and abroad, the study of the use benefit of educational funds has always been one of the popular problems in the field of educational economics. The research in this field aims to explore the impact of the investment of educational funds on the quality of education and the strategies to improve the efficiency of the use of educational funds. Domestic and foreign studies are mainly conducted from the following aspects

1) Research on the relationship between education funding level and education quality

The researchers analyzed the relationship between education funds and education quality in different regions and at different economic levels. They studied the role of educational funds in improving the quality of education, including the total amount of educational funds, the composition of educational funds, the allocation of educational funds and other factors.

2) Evaluation methods and index system of the use benefit of educational funds

In order to evaluate the use benefit of educational funds, the researchers have proposed a series of evaluation methods and index system. These methods and indicators include the economic evaluation of the use benefit of educational funds, the evaluation of students' learning results, the evaluation of educational resource allocation and so on. Through these evaluation methods and indicators, the use benefit of educational funds can be objectively evaluated.

3) Research on the strategy of improving the use and efficiency of educational funds

The researchers also discussed the strategies to improve the use efficiency of education funds from the perspective of policy and practice. These strategies include improving the use mechanism of education funds, optimizing the allocation mode of education funds, and improving the efficiency of the use of education funds. At the same time, they also studied the successful cases of various countries

in improving the efficiency of using education funds, and summarized the experience and lessons available for reference.

Through the review of the research on the use efficiency of educational funds at home and abroad, we can understand the research status and achievements of the use efficiency of educational funds in different countries and regions, which helps us to deeply understand the relationship between the use efficiency of educational funds and the quality of education, and how to improve the use efficiency of educational funds.

5.2. Overview of education quality research at home and abroad

Overview of education quality research at home and abroad: With the increasingly prominent importance of education funds in the field of education, more and more researchers begin to pay attention to the relationship between education quality and the use efficiency of education funds. Research on education quality at home and abroad has also made significant progress. In China, researchers usually analyze the aspects of educational resources, teacher-student ratio, and curriculum setting to evaluate the level of educational quality. In foreign countries, researchers pay more attention to the establishment of educational evaluation methods and index system, and explore the influencing factors of educational quality from the aspects of students' learning results, students' participation and teachers' quality. The review of the overview of education quality research at home and abroad will help to deeply understand the relationship between education quality and the benefit of education funds use, and provide reference for subsequent studies^[9].

5.3. Research progress in the relationship between the use benefit of educational funds and educational quality

The research progress of the relationship between the use efficiency of educational funds and education quality at home and abroad mainly includes the following aspects:

Overview of the research on the use of educational funds at home and abroad: Introduce the research work of domestic and foreign scholars on the relationship between the use of educational funds and education quality, including the research purpose, methods and data sources. At the same time, the development process of the research on the use benefit of educational funds at home and abroad is reviewed, and the theoretical basis and empirical analysis framework of the research are discussed.

The Impact of Beneficial Utilization of Education Funds on Education Quality: Summarize current research results both domestically and internationally, and explore ways in which the advantages of education fund utilization can help improve education quality. Specifically, it includes the relationship between the allocation of educational resources and students' learning results, and the influence of educational funding investment on teachers' quality and teaching quality.

The influencing factors of the relationship between the beneficial utilization of educational funds and educational quality: Analyze the factors identified in domestic and foreign research that affect the correlation between the beneficial utilization of educational funds and educational quality. These factors include government education investment policies, mechanisms for managing and supervising education funds, and other related aspects. In addition, it is necessary to consider the impact of different education systems and development stages at home and abroad on this relationship.

Research methods and data sources: introduce the research methods and data sources adopted by domestic and foreign scholars in studying the relationship between the use efficiency of educational funds and education quality, including the application of quantitative research and qualitative research methods, the collection and processing process of data, etc. At the same time, the advantages and disadvantages of the research methods and data sources are analyzed, as well as the future research direction and improvement suggestions^[10].

6. Conclusions

This paper aims to explore the relationship between the efficiency of educational funds and the quality of education. Through the study and analysis of the relevant literature, we can draw the following conclusions and implications.

First of all, the use efficiency of educational funds is closely related to the quality of education. Effective use of educational funds can improve the quality of education, while waste and unreasonable use will have a negative impact on the quality of education. Therefore, the use of educational funds must pay attention to the efficiency, reasonable allocation of resources, and use the funds for the key areas and links to improve the quality of education^[11].

Moreover, the government plays an important role in the use of educational funds. The government should formulate scientific and reasonable policies for the allocation of educational funds, ensure the rational allocation and use of educational funds, and give priority to supporting the construction of educational infrastructure and the balanced distribution of educational resources^[12]. At the same time, the government should also strengthen the supervision and evaluation of the use of education funds, timely find and correct the improper use of funds, to ensure the maximum benefit of education funds.

In short, the use benefit of educational funds is inseparable from the quality of education. Only by making rational use of education funds and through multi-party cooperation and support from the government can we improve the quality of education and contribute to the training of outstanding talents and national development.
