Abstract: This paper systematically studies and explores the innovative issues of ideological and political education for college students in the context of the new media era. By analyzing the development and application of new media technology, combined with interdisciplinary integration and diversified education models, some innovative educational paths have been proposed. Research suggests that in the era of new media, ideological and political education for college students should actively apply new media technology, utilize new media platforms to disseminate ideological and political knowledge, and broaden their horizons; Meanwhile, interdisciplinary integration can cultivate students' comprehensive analysis and problem-solving abilities; The diversified education model focuses on individual differences, improving student participation and learning outcomes. However, implementing the innovation path still faces challenges such as teacher team building, educational resource and platform construction. Therefore, it is necessary to strengthen teacher training and educational resource construction, and continuously improve the implementation methods and effects of innovative paths.

Keywords: The era of new media; Ideological and political education for college students; New media technology; Interdisciplinary integration; Diversified education models

1. Introduction

With the continuous development and popularization of new media technology, ideological and political education for college students is also facing unprecedented challenges and opportunities. In the era of new media, college students are in an environment of information explosion and diversified values, and traditional ideological and political education models can no longer meet their needs [1]. Therefore, how to innovate ideological and political education for college students in the era of new media has become an urgent problem to be solved.

The article first introduces the definition, goals, and importance of ideological and political education for college students, as well as the challenges and opportunities faced by ideological and political education for college students in the new media era. Then, in-depth discussions will be conducted on the application of new media technology in ideological and political education for college students, the role of social media platforms, innovative applications of online courses and learning, the application of big data analysis in ideological and political education for college students, and the exploration of interdisciplinary integration and diversified education models. Finally, based on actual case analysis and data research, evaluate the effectiveness of the innovation path and provide prospects for future innovation in ideological and political education for college students.

The research results of this article will provide theoretical guidance and practical reference for the innovation of ideological and political education for college students, help promote the further development of ideological and political education for college students in China, enhance their comprehensive quality and ideological consciousness, and promote the long-term development of higher education in China.

2. Overview of ideological and political education for college students

2.1 Definition and objectives of ideological and political education for college students

Ideological and political education for college students refers to a series of educational activities that

guide them to establish correct worldviews, life philosophies, and values, enhance their patriotism, collectivism, and socialist consciousness, cultivate their sense of social responsibility, innovative spirit, and practical ability, and ultimately achieve the goal of promoting the comprehensive development and healthy growth of college students[2].

The goals of ideological and political education for college students mainly include three aspects: first, cultivating patriotism, collectivism, and socialist consciousness among college students. As college students of the new era, they are the builders and successors of the future of our country. They should establish patriotism from a young age, deepen their understanding of the socialist system with Chinese characteristics, enhance collective consciousness and sense of responsibility, and strive to achieve the great rejuvenation of the Chinese nation. Secondly, improve the moral level and humanistic literacy of college students. College students should not only possess solid professional knowledge, but also pay attention to the comprehensive improvement of their own qualities, possess good moral and humanistic qualities, and form healthy values and lifestyles. Thirdly, cultivate the innovative consciousness and practical ability of college students. Currently, innovation has become an important driving force for national development. As the backbone of future society, college students should focus on cultivating their own innovative spirit and practical abilities, actively explore new learning and work models, and contribute to the realization of the national innovation driven strategy.

2.2 The importance and current situation of ideological and political education for college students

Ideological and political education for college students has always been an indispensable and important part of higher education. Through ideological and political education, college students can be guided to establish a correct worldview, outlook on life, and values while learning professional knowledge, and develop comprehensive personality and abilities. The ideological and political education of college students has important practical and strategic significance in ensuring the quality of higher education and improving the quality of talent cultivation.

However, there are still some problems and shortcomings in the ideological and political education of college students at present. Firstly, the traditional model of ideological and political education is too singular and rigid, unable to meet the diverse needs of college students. Secondly, ideological and political education lacks specificity and effectiveness, sometimes even becoming a tool for formalism and bureaucracy. Furthermore, the ideological and political education of college students is disconnected from practical life and social reality, lacking innovation and foresight.

2.3 Challenges and opportunities of ideological and political education for college students in the new media era

With the popularization and development of new media technology, ideological and political education for college students is facing new challenges and opportunities. On the one hand, in the new media environment, the channels for college students to obtain information are more extensive and convenient, but at the same time, they are also susceptible to the influence of false information and negative values. Therefore, it is necessary to strengthen education and guidance. On the other hand, new media technology can provide more innovative means and ways for college students' ideological and political education, such as online learning, WeChat official account, webcast, etc., to enhance the pertinence and effectiveness of education. Therefore, how to innovate ideological and political education for college students in the era of new media has important theoretical and practical significance.

3. Analysis of innovative needs for ideological and political education of college students in the era of new media

3.1 Analysis of the use of new media by college students

With the rapid development of Internet technology, college students widely use various new media platforms and tools in their daily life. They obtain information, exchange opinions, and express their voices through social media, online search engines, online forums, and other channels. New media provides college students with more sources of information and communication methods, making it more convenient for them to acquire knowledge and participate in social discussions[3].

3.2 Current situation and problems of ideological and political education for college students in the era of new media

However, the ideological and political education of college students in the era of new media also faces some challenges and problems. Firstly, college students face the problem of information overload when using new media. The proliferation of massive information sources can easily lead to confusion in the selection and judgment of information among college students, and even be misled by false information and negative values. Secondly, due to the characteristics of new media communication, college students are often more easily exposed to information that aligns with their interests, leading to a tendency towards information isolation and fragmented thinking. In addition, some new media platforms also have the problem of disturbing and interfering with the normal learning and life of college students.

3.3 Analysis of the needs of college students for ideological and political education in the new media era

In response to the above issues, college students have put forward some needs for ideological and political education in the new media era. Firstly, college students hope that ideological and political education can be combined with new media, spreading educational content through new media platforms, providing more diverse and interactive educational methods to attract their attention, increase learning interest and participation. Secondly, college students expect ideological and political education to help them solve the problems of information overload and information closure, provide accurate and authoritative information sources, and teach them correct information analysis and evaluation thinking abilities, cultivating independent thinking abilities. In addition, college students also hope that ideological and political education can pay attention to their actual needs and interests, closely combine their majors and social hot issues, and provide them with targeted educational content and practical opportunities.

4. Analysis of innovative paths in ideological and political education for college students in the era of new media

4.1 Application of new media technology in ideological and political education for college students

With the rapid development of new media technology, it has had a profound impact on the ideological and political education of college students. New media technology provides college students with more convenient and diverse channels for obtaining information. Through social media platforms, online search engines, and online educational resources, college students can easily obtain rich ideological and political knowledge, and share and communicate with others. This breaks the limitations of information acquisition in traditional education, making ideological and political education more open and extensive. The interactivity and participation of new media technology make college students more actively participate in ideological and political education. Through online discussions, comments, and likes, college students can express their opinions, communicate with others, and participate in social topics. This interactive and participatory approach enhances the interest and participation of college students in ideological and political education, promoting their thinking and learning.

In response to the development of new media technology, many universities have begun to explore its application in ideological and political education for college students. A common application method is to establish specialized online platforms or social media accounts to provide content related to ideology and politics. These platforms can publish interesting educational content in the form of videos, articles, comics, etc., to attract the attention and participation of college students. At the same time, through online Q&A, interactive discussions and other forms, promote communication and debate among college students, and improve their thinking and logical thinking abilities. In addition, some universities are also setting up online courses or learning groups on new media platforms to provide systematic ideological and political education training for college students. These courses can be combined with various forms such as videos, PPTs, and online tests to make learning more vivid and interesting. Meanwhile, through the establishment of learning groups, students can share their learning experiences and answer questions with each other, forming a good learning atmosphere and mutual assistance mechanism.

4.2 The role of social media platforms in ideological and political education for college students

Social media platforms play an important role in ideological and political education for college students. They not only provide a platform for college students to obtain information, exchange ideas, and participate in discussions, but also stimulate their thinking ability and critical thinking, promoting their comprehensive development.

Firstly, social media platforms have expanded the dissemination channels of ideological and political education for college students. Through social media platforms, college students can access rich ideological and political knowledge and information anytime and anywhere, understand domestic and international current events, broaden their horizons, and enhance their ideological and political literacy. At the same time, social media platforms are also important places for college students to express their opinions and exchange ideas. They can interact with others through posting blogs, comments, likes, and other interactive methods to deepen their understanding and thinking of major issues. Secondly, social media platforms promote the participation and interactivity of ideological and political education for college students. In traditional education, college students passively receive knowledge and lack opportunities for active participation and expression. On social media platforms, they can freely express their opinions, discuss with others, and participate in various topics and activities. This increase in interactivity and participation has stimulated the thinking ability and creativity of college students, cultivating their spirit of cooperation and teamwork. However, social media platforms also face some challenges. Firstly, it is difficult to guarantee the authenticity and quality of information. On social media platforms, there is a large amount of false information, rumors, and low-quality content, which may mislead college students and affect their values and ways of thinking. Secondly, the use of social media platforms may lead to information overload and distraction, making it difficult for college students to effectively screen and acquire valuable ideological and political knowledge. Thirdly, social media platforms also face issues such as privacy breaches and network security, which require strengthened management and guidance.

4.3 Innovative application of online courses and online learning in ideological and political education for college students

The innovative application of online courses and online learning in ideological and political education for college students has had a positive impact on improving teaching effectiveness, expanding educational resources, and promoting student participation. We should innovate the design of online courses and online learning in the ideological and political education of college students.

Firstly, it is necessary to carefully design the content and structure of online courses. Online courses should closely focus on the ideological and political education goals and needs of college students, reasonably divide modules, arrange teaching content, and ensure the combination of ideological and political knowledge and theory with practice. At the same time, it is necessary to fully utilize multimedia technology and stimulate students' interest in learning through vivid and interesting teaching materials and cases with illustrations and text. Secondly, it is necessary to establish an effective learning evaluation mechanism. Online courses and learning should have corresponding assessments in the form of tests, assignments, and discussions to test students' learning effectiveness and thinking abilities. At the same time, teachers should also provide timely feedback and guidance to help students improve their learning methods and enhance the quality of learning. In addition, it is necessary to strengthen the guidance and supervision of teachers. In online courses and learning, teachers should not only play the role of knowledge transmitters, but also as guides and facilitators. Teachers should guide students to engage in in-depth and independent thinking, and help them solve learning problems and confusions through online discussions and personalized guidance.

4.4 Application of big data analysis in ideological and political education for college students

The application of big data analysis methods in ideological and political education for college students is very extensive. It can be used to analyze students' ideological and political concepts and attitudes. By collecting and analyzing students' views, opinions and behaviors on the Internet, we can deeply understand students' ideological and political concepts and attitudes, help teachers better grasp students' learning characteristics and needs, and design curriculum content and forms that are more practical. Big data analysis methods can also be used to evaluate and optimize teaching effectiveness. By analyzing the behavior and achievements of students in online learning, it is possible to timely understand their learning situation, evaluate teaching effectiveness, optimize teaching methods and approaches, and

improve the quality of their learning. Big data analysis methods can also be used for prediction and decision-making. By analyzing and mining a large amount of student data, valuable information and patterns can be discovered, helping teachers and schools make more accurate and scientific decisions.

The application of big data analysis in ideological and political education for college students has achieved some successful cases. For example, a certain university used big data analysis technology to deeply mine and analyze the learning data of students on the internet, and found that students have serious bad learning behaviors in the learning process, such as plagiarism and cheating. In response to this situation, the school has taken a series of measures, such as enhancing students' learning awareness, regulating teaching behavior, etc., effectively improving their learning attitude and behavior. In addition, a certain university also used big data analysis methods to analyze and predict the academic performance of students. By analyzing data such as students' historical grades, exam performance, and homework completion, predict their future performance trends, and provide timely learning advice and guidance to help students improve their learning outcomes.

4.5 Exploration of interdisciplinary integration and diversified educational models

With the continuous development and progress of society, the task of ideological and political education for college students has become increasingly important. In order to better meet the needs and requirements of students, university education should not only focus on imparting subject knowledge, but also on interdisciplinary integration and the design and implementation of diversified educational models. Interdisciplinary integration refers to the combination of knowledge and methods from different disciplines to form new disciplinary knowledge and methods. Interdisciplinary integration is of great significance and role in the ideological and political education of college students.

Diversified education mode refers to adopting various educational methods and approaches based on the needs and characteristics of students, to meet their different needs and requirements. The design and implementation of diversified educational models are also of great significance and role in the ideological and political education of college students. Firstly, diversified educational models can enhance students' interest and enthusiasm in learning, and stimulate their active learning awareness. Secondly, diversified educational models can also help students better understand and master ideological and political knowledge. In a diversified educational model, teachers can adopt different teaching methods and forms to enable students to learn, think, and experience in different contexts, thereby gaining a deeper understanding and mastery of ideological and political knowledge. Finally, diversified educational models can also promote the cultivation of students' comprehensive and innovative abilities. In a diversified education model, students need to have the ability to process information, analyze problems, and solve problems, which is crucial for cultivating their comprehensive and innovative abilities. Overall, interdisciplinary integration and diversified education models have great potential and advantages in ideological and political education for college students, but they also require continuous exploration and practice, strengthened evaluation and improved quality to better serve students and society.

5. Conclusion

This paper draws the following conclusions through the analysis of relevant theories and practices. Firstly, interdisciplinary integration is an important way to innovate ideological and political education for college students. Interdisciplinary integration can help students comprehensively and from multiple perspectives understand social issues, and cultivate their ability to comprehensively analyze and solve problems. Combining knowledge from different disciplines with ideological and political education can improve students' learning outcomes and thinking abilities. At the same time, the application of diversified education models can also bring innovation to the ideological and political education of college students. The diversified education model emphasizes individual differences, adopts different teaching methods and means according to the interests, needs, and characteristics of students, and improves their participation and learning effectiveness. Through diversified educational models, it is possible to stimulate students' creativity and innovative spirit, and enhance the effectiveness of ideological and political education. However, implementing innovative paths for ideological and political education for college students based on the new media era still faces some challenges. The first issue is the construction of the teaching staff, which requires the cultivation of teachers with interdisciplinary knowledge and the ability to apply new media technologies. Secondly, the construction of educational resources and platforms requires the provision of good hardware facilities and comprehensive educational resource support. In addition, it is necessary to strengthen the evaluation and research of

ideological and political education for college students in the new media era, and continuously improve the implementation methods and effects of innovative paths.

In summary, the innovative path of ideological and political education for college students based on the new media era should fully utilize new media technology, introduce interdisciplinary integration and diversified education models. Through these innovative approaches, the ideological and political literacy and comprehensive abilities of college students can be improved, and new era talents with innovative consciousness and social responsibility can be cultivated. At the same time, it is necessary to strengthen the training of relevant teachers and the construction of educational resources to ensure the effective implementation of innovative paths and provide better services for the ideological and political education of college students.
