**Keywords:** *Economic management; Modernization; The new trend; Analysis and Outlook*

## **1. Foreword**

The effect of economic management has a great impact on economic development, so it is necessary to improve management ability to ensure the maximum effect and promote better economic development. The economy is developing continuously, and the new period has the new characteristic, therefore the economic management must innovate, develops toward the modernization, enhances the management rationality and the science.

## **2. Analysis of modernization of economic management**

### ***2.1 Realize active management and creative management***

The modernization of economic management must change ideas, strengthen active management, give full play to people's initiative, do a good job in economic analysis and research, find out the existing problems and solve them in time, so as to continuously optimize and perfect management and promote economic development through effective management. Economic management modernization to be creative, ought to be in clear own duty, take measures to make the staff clear goals, make full use of and mobilize various resources, mutual cooperation and efforts, in actively promoting economic management at the same time, the innovation management ideas and management methods, better realize the goal of economic management and improve the results, real management value and function into full play.

In economic management, management systems and measures will be formulated. If the thinking is solidified and the system itself is adhered to for a long time, the management will be too rigid, which may achieve certain results in the short term, but there are limitations, which are not conducive to the achievement of long-term management goals. So modern management should strengthen the initiative at the same time, the strengthening of creativity, let everyone talents and strengths, completes the related resources optimal allocation, and further explore the potential and advantages, ultimately maximize people and objects, outside the management efficiency to improve the effect of independent value, ensure finish economic management objectives and tasks.

### ***2.2 Strengthen thinking and planning***

The modernization of economic management should strengthen the understanding, clear people in management can understand and control things is limited, want to improve the quality and efficiency of management, need to grasp from the source, do a good job in management planning, formulate

measures to solve the existing problems. During the adjustment of the modernization of economic management, we should make a good summary of the management, be good at discovering and putting forward problems, analyze the causes, and continuously optimize the management through planning and management improvement, targeted treatment and solution.

In the modernization of economic management, the center of gravity should be shifted, from grasping management in the past, to the transition to management. Economic management should think more and summarize more, clear up the threads and ideas, and master the realistic problems, fundamentally eliminate, usually by optimizing the management system and improve the management plan and measures to achieve the goal. The removal of factors and obstacles affecting economic management, even if less regulation, the effect will be improved.

### ***2.3 Democratization and specialization of management***

The modernization of economic management should improve the professionalism, and the effectiveness of management is closely related to the professional ability and business ability of managers, so it is very important to promote professional management. Economic management is extremely complicated and involves many factors, so those engaged in it should master professional knowledge and dabble in the relevant parts. On the one hand, in the staff recruitment and selection, the introduction of economics related professionals, on the other hand to strengthen economic management personnel training, make its full mastery of economic theory and system, have a deep knowledge and understanding for new economic development situation, clear production related content, can be adjusted according to the change and demand management, with a strong business capability, Promote the improvement of economic management quality in specialized management.

Economic management must be within the relevant policies and frameworks, and must comply with relevant laws and regulations. Managers must have a good understanding of these, and ensure that the economic management strategies formulated have operability, can be implemented in practical work and achieve good results. Economic development is very important, economic construction needs the participation of all the people, in the process of performing their respective duties and playing their respective roles, to jointly promote economic development. Under the new normal, economic development needs to be established on the basis of innovation. Therefore, economic management should do a good job in innovation guidance, stimulate and mobilize the people's innovation and creative initiative, and finally drive development with innovation and inject inexhaustible power for economic development, which is the top priority of current economic management. Mining and development of creativity, established on the basis of democratic management, for managers to democratic management, how to listen to Suggestions and ideas, ideas of management planning and strategy, the maximum play to the collective wisdom and creativity, help to the correct direction of management and decision-making, science, advanced, thus ensuring management effect is prominent. In addition, economic management should also take democratic management of the relevant parts to stimulate the enthusiasm of enterprises and the people, so that they can take the initiative to create and build a national innovation environment, so as to drive economic development and achieve the goals of economic management.

### ***2.4 Raise the level of management technology***

The modernization of economic management should keep pace with the development of science and technology, innovate management means and improve management efficiency and effectiveness through information technology and automation technology. With the help of computer technology, the establishment of economic management system and platform, collect all kinds of information related to management, summarize and analyze it, clarify the implementation of management strategy, tracking and guidance, conducive to the improvement of management quality. In economic management, information technology is used to deal with relevant information, and problems are found, so as to ensure more effective management. Big data technology is used to dig out factors affecting economic management and grasp the internal relationship between the causes and other aspects. Optimization on the basis of clear problems, strong pertinence of economic management, and finally can obtain better results.

Economic management effectively applies scientific and technological innovation achievements, strengthens the integration with advanced technology, makes management more scientific, but also can achieve automatic management. With the support of advanced technology, economic management will

become efficient. To promote innovation is the key in economic management. Internet platforms can be used to publicize relevant policies, answer questions online, or guide innovation, so as to drive the creation of all walks of life and achieve the goal of innovation-driven development, which is also the main driver of economic development. Scientific and automatic economic management can unify management and service and provide effective guarantee for improving management effect.

### **3. New development trend of economic management**

#### ***3.1 More humanization***

In any case, economic management should ensure its own adaptability and truly promote economic development. To achieve this goal, people must be mobilized so that managers can be active in their work and have the consciousness of innovation and creation, which requires the humanization of management to be promoted. In addition, the humanization of economic management is also reflected in the need to mobilize the initiative of all people related to economic development in the society to play a maximum role in realizing the goal of economic development. Economic development is driven by people, and human beings are also the dominant factor in innovation. Therefore, the new development trend of economic management is more humanized and people-oriented. Under the circumstance of investigating, analyzing and understanding the real and reasonable needs of people, economic management should be satisfied as far as possible.

Precisely matching the material and spiritual needs of enterprises and individuals in economic management, enterprises will actively carry out innovation, upgrading and transformation, and jointly boost economic development by optimizing and improving economic benefits. The employees in the enterprise will do their best, and everyone will actively create value. All fields will develop rapidly, and the created value and benefits will be higher, and the economic management goals will be realized. The combination of humanized management and scientific management is the main development trend of economic management, and also the core and key to improve the effectiveness of management.

#### ***3.2 Flat management***

In the past, the economic management adopted a pyramid structure, which had some drawbacks. The upper echelon was mainly responsible for management formulation and decision-making, but they did not have a good understanding of the situation at the grass-roots level, and decision-making was prone to problems. In addition, in this management mode, the upper level has authority while the lower level performs mechanically, which leads to problems that cannot be corrected in time and affects the creativity consciousness and enthusiasm. Based on the demand of economic management, the new development trend must be flat. The upper decision-makers can timely understand all the information related to economic management, and then make democratic decisions, synthesize the opinions of relevant personnel, make accurate judgments according to different situations, and improve the accuracy and scientific of economic management decisions.

The flatness of economic management is conducive to the mutual exchange of needed goods, mutual exchange of information and sharing of resources, so as to make full use of talents and materials, maximize initiative and creativity, self-improvement and self-restraint in work, continuous optimization, and better management effect.

#### ***3.3 Software management***

Economic management development from hardware management, gradually transition to software management. The past and current economic management is based on hardware management, mainly including personnel management, using hardware equipment management, there are certain limitations. New trend of development for the software management to knowledge management, with the aid of software automation and intelligent management, and constantly sum up experience and optimize the management, integrating the above mentioned factors, converted to help the economy development and enterprise management benefit promotion resources, with continuous innovation and improvement, improve management performance.

#### 4. Conclusion

To sum up, modern economic management should be appropriately reduced, do a good job of thinking and planning, really solve the existing problems, so as to improve the effectiveness of management. The modernization of economic management needs democratization, creativity strengthening, scientific management and automatic management, so as to make management more adaptable, improve quality and efficiency, and promote sustainable economic development under the new normal. The future economic development will be more humanized, and move towards flat management and software management, in order to enhance adaptability and ensure effective management.
