

Research on the Management of Student Daily Behavioral Norms and the Guiding Mechanism of Cultivating Education

Zexi Yang

The University of Queensland, St. Lucia QLD 4072, Australia

Abstract: *The management of students' daily behavior norms and the development of education and guidance mechanisms is one of the important contents of school management, which involves the cultivation of students' behavior habits, moral cultivation, and personal qualities. Good behavioral norms and educational guidance mechanisms can help students establish correct values and behavioral norms, cultivate good behavioral habits, and improve their overall quality. However, in practical operation, there are some problems with the management of students' daily behavior norms and the guidance mechanism for cultivating education. Therefore, it is necessary for teachers to conduct in-depth exploration of the management of students' daily behavior norms and the guidance mechanism for cultivating education, in order to improve the level of school management and promote the comprehensive development of students. This article aims to explore optimization strategies for the management of students' daily behavior norms and the development of educational guidance mechanisms, in order to promote their comprehensive development, cultivate their sense of social responsibility and teamwork spirit.*

Keywords: *Standardized management of students' daily behavior; Nurturing education; Guiding mechanism*

1. Overview of the Management and Cultivation Education Guidance Mechanism for Students' Daily Behavioral Norms

The education and guidance mechanism for managing and cultivating students' daily behavior norms is a series of management measures and educational guidance methods developed by schools to cultivate students' good behavior habits and moral qualities. These mechanisms aim to guide students to comply with school rules and regulations, cultivate their sense of self-discipline and responsibility, and promote their comprehensive development. The following is a brief introduction to the management and development education guidance mechanism for students' daily behavior norms:^[1]

1) Rules and regulations construction: The school formulates clear rules and regulations, including student code of conduct, campus order management, classroom discipline, etc., which clearly stipulate the behavioral norms that students should abide by.

2) Management Responsibility System: The school establishes a management responsibility system, clarifying the responsibilities and authorities of management personnel at all levels, and ensuring the effective implementation of rules and regulations.

3) Behavioral norms publicity and education: Schools promote behavioral norms to students through various forms of publicity and education activities, and enhance their awareness of behavior and rules.

4) Reward and Punishment Mechanism: Schools establish a reward and punishment mechanism to praise and reward students for their good behavior, criticize and punish violations, and motivate students to comply with rules and regulations.

5) Typical demonstration and guidance: the school awards exemplary individual and collectives by setting up typical demonstration, guides students to learn from excellent examples, and establishes correct behavior guidance.

Through the establishment and implementation of the above mechanisms, schools can effectively manage students' daily behavior, guide them to develop good behavior habits and moral qualities, and

provide a favorable environment and conditions for their comprehensive development.

2. The Importance of Standardized Management of Students' Daily Behaviors and the Guidance Mechanism for Developing Education

The management of students' daily behavior norms and the development of educational guidance mechanisms are important components of educational management, which are of great significance for cultivating students' good behavior habits and moral literacy. The following will elaborate on its importance from three aspects.^[2]

Firstly, the management of students' daily behavior norms and the development of educational guidance mechanisms can help shape students' good character. Students are the future and hope of society, and their moral qualities are directly related to the development of the country and society. By regulating students' daily behavior, they can be guided to form correct values and moral values, and cultivate good qualities such as self-discipline, discipline, respect for others, honesty and trustworthiness. These qualities not only have a significant impact on students' personal growth and development, but also have profound implications for their future social roles and responsibilities.

Secondly, the management of students' daily behavior norms and the development of educational guidance mechanisms can help improve students' learning outcomes. Good behavior habits and standardized behavior norms are the foundation of learning. By regulating students' daily behavior, it is possible to cultivate good learning habits, such as completing homework on time, listening attentively, and actively participating in classroom activities. These habits can improve students' learning outcomes, enhance their interest and initiative in learning, cultivate their learning abilities and innovative thinking, and lay a solid foundation for their future development.

Finally, the management of students' daily behavior norms and the development of educational guidance mechanisms can help promote students' comprehensive development. The development of students is not limited to academic aspects, but also includes multiple aspects such as thinking ability, creativity, social skills, and leadership skills. By regulating students' daily behavior, it is possible to cultivate good living habits and behavioral norms, improve their self-management and self-restraint abilities, cultivate their teamwork and communication skills, and exercise their leadership skills. The cultivation of these abilities and qualities is of great significance for the improvement and comprehensive development of students' comprehensive qualities.

In summary, the management of students' daily behavior norms and the development of education and guidance mechanisms are of great significance for cultivating students' good behavior habits and moral literacy. It helps to shape students' good character, improve their learning outcomes, and promote their comprehensive development. Education managers and teachers should attach importance to the management of students' daily behavior norms and the construction of educational guidance mechanisms, formulate scientific and reasonable norms and systems, guide students to develop good behavior habits and moral qualities, and lay a solid foundation for their future development.

3. The problems in the management of students' daily behavior norms and the guidance mechanism for cultivating education

The management of students' daily behavior norms and the development of educational guidance mechanisms are important components of school education, playing a crucial role in cultivating students' behavioral habits, moral qualities, and personal qualities. However, there are currently some issues that hinder the effective operation and effectiveness of this mechanism.^[3]

Firstly, there is a problem of excessive rigidity and rigidity in the management of students' daily behavior norms. Some schools place too much emphasis on discipline and the execution of rules, neglecting students' personalities and characteristics. This one size fits all management approach can easily lead to students' aversion and resistance, and even develop a rebellious mentality. Therefore, schools should pay more attention to personalized management and develop corresponding norms and management measures based on the different characteristics and needs of students.

Secondly, there is a lack of effective incentive mechanisms in the guidance mechanism of nurturing education. At present, many schools overly rely on punishment methods and neglect the role of incentives in nurturing education. Only when students receive rewards and recognition will they actively participate in nurturing education. Therefore, schools should establish a comprehensive

incentive mechanism to motivate students' learning and development by rewarding them for their excellent behavior and achievements.

Once again, there is a lack of cooperation between family and school in the management of students' daily behavior norms and the guidance mechanism for cultivating education. School and family are two important environments for students' growth. Only by working closely together can they better guide students to form good behavior habits and moral qualities. However, communication and cooperation between schools and families are not yet close enough, resulting in differences in students' behavioral norms in different environments. Therefore, schools should strengthen communication and cooperation with parents, jointly develop and implement student behavior norms and development education plans.

Finally, there is still a lack of effective supervision and evaluation in the management of students' daily behavior norms and the guidance mechanism for cultivating education. Schools should establish a scientific and fair supervision and evaluation mechanism to regularly inspect and evaluate students' behavioral norms and development education. Only through supervision and evaluation can problems be identified in a timely manner and corresponding measures be taken to correct and improve.

In summary, there are some problems in the management of students' daily behavior norms and the guidance mechanism for cultivating education, which require joint efforts from schools and education departments to solve. Through personalized management, establishing incentive mechanisms, strengthening home school cooperation, and establishing effective supervision and evaluation mechanisms, students can be better guided to form good behavior habits and moral qualities, promoting their comprehensive development.

4. Strategies for optimizing the management and development education guidance mechanism of students' daily behavior norms

In the education process, it is crucial to manage students' daily behavior norms and develop educational guidance mechanisms. Effective management strategies and educational guidance mechanisms can help teachers shape students' behavior, cultivate good habits, and promote their comprehensive development. The following is a discussion of some optimization strategies.^[4]

4.1. Establish clear norms and guidelines

Schools should establish clear daily behavioral norms and guidelines. These norms and guidelines should cover all behaviors of students both inside and outside the school, including academic integrity, classroom order, interaction with others, and protection of public property. These norms should not only be clear, but also specific, so that students can understand and follow them.

4.2. Promotion and Interpretation

The effectiveness of norms and guidelines comes from students' understanding and adherence. Therefore, schools need to promote and explain these norms and guidelines through various channels, such as teacher meetings, student meetings, parent meetings, etc. This not only helps students better understand norms, but also prevents misunderstandings and confusion from the beginning.

4.3. Continuous education and guidance

Student behavior management is an ongoing process. Schools need to continuously educate and guide students to have a clear understanding and follow the norms. This can be achieved through regular lectures, class activities, and other means.

4.4. Strengthen the guidance and demonstration role of teachers

Teachers are guides and demonstrators in cultivating students' behavioral norms, and their words and deeds play an irreplaceable role in shaping students' behavior. Therefore, the primary strategy for optimizing the management of students' daily behavior norms and cultivating educational guidance mechanisms is to strengthen the guidance and demonstration role of teachers.

4.4.1. Improving teachers' educational awareness

Teachers should have a deep understanding of the responsibility and mission of educating students, and attach importance to the cultivation of student behavior norms. Schools should regularly organize teachers to participate in educational training to improve their educational awareness and level. As important guides in the growth process of students, teachers should possess noble moral qualities and educational literacy. They not only need to impart knowledge, but also pay attention to cultivating students' moral character and behavioral norms. They should use their own words and actions to demonstrate correct behavioral norms and become role models and role models for students.

4.4.2. Teacher's behavior demonstration

Teachers should lead by example, abide by campus behavioral norms, maintain good teacher ethics and conduct, and influence and guide students to form good behavior habits through practical actions. Every move of a teacher can have a subtle impact on students. Therefore, teachers should become role models for students, demonstrating correct behavioral norms and values..

4.5. Personalized management

4.5.1. Personalized education plan

Teachers should develop personalized education plans tailored to the different characteristics of each student, guiding them to develop good behavioral norms in a targeted manner. Personalized education plans can better meet students' personalized needs and help them cultivate good behavioral norms and habits. When formulating a plan, teachers need to fully understand the interests, learning abilities, family background and other factors of each student, and based on this, develop a specific and feasible plan.

4.5.2. Teaching according to students' aptitude

Teachers should choose appropriate educational methods based on the different situations of students, so that students can feel respect and understanding in the process of receiving education. Teaching students according to their aptitude can ensure that each student receives appropriate guidance and assistance, thereby better achieving personalized management.

4.6. Establish incentive mechanisms

4.6.1. Praise and reward

Teachers should give appropriate praise and rewards to students who adhere to behavioral norms and perform well, so that students feel recognized and encouraged for their efforts. Praise and rewards can take various forms, such as oral praise, awarding certificates of commendation, and providing material rewards. At the same time, teachers should pay attention to the fairness and timeliness of praise and rewards, so that students feel that their efforts have been duly rewarded.

4.6.2. Role model

Selecting excellent students as role models allows students to feel the excellent behavior patterns around them, thereby stimulating their initiative and initiative. The mutual comparison and competition among students is also a part of the incentive mechanism, and teachers can stimulate students' enthusiasm and initiative by conducting various competitions and evaluation activities.

4.7. Home school cooperation

4.7.1. Parent Meeting

Regularly hold parent meetings to communicate with parents about students' performance in school, understand their behavior in the family environment, and jointly develop educational plans. Parents' meetings are a bridge connecting schools and families, allowing parents to better understand students' performance and learning situation in school, and also allowing schools to understand students' performance and living conditions in the family environment. At the parents' meeting, teachers can have face-to-face communication with parents, discuss students' growth issues together, and formulate corresponding education plans.

4.7.2. Family education guidance

Teachers provide parents with family education guidance to help them understand their children's growth needs and improve the quality of family education. Family education is a supplement and extension of school education, which plays an irreplaceable role in students' growth. However, many parents lack professional educational knowledge and experience, so schools need to provide corresponding family education guidance. Teachers can improve parents' educational awareness and level by conducting parent training, family education lectures, family education consultations, and other methods, helping them better guide their children's growth.^[5]

4.8. Establish an effective monitoring and evaluation mechanism

4.8.1. Supervision mechanism

Schools should establish a supervision team composed of teachers, students, and parents to supervise and guide students' behavior, ensuring that students comply with behavioral norms. The supervision mechanism can monitor and manage students' behavior in real-time, detect and correct bad behaviors in a timely manner, and ensure the standardization and health of students' behavior. At the same time, the supervision mechanism can also encourage and praise students' good behavior, further strengthening their awareness of behavioral norms.

4.8.2. Evaluation mechanism

Regularly evaluate student behavior, analyze educational achievements, identify existing problems, and adjust educational strategies in a timely manner. The evaluation mechanism can regularly evaluate and assess students' behavior, understand their behavior and changes, and analyze the problems and shortcomings in education. At the same time, the evaluation mechanism can also provide a basis and reference for adjusting educational strategies, making education more in line with students' actual needs and growth patterns.

Overall, managing students' daily behavior norms and developing educational guidance mechanisms is a long-term and arduous task that requires teachers to use multiple strategies and make efforts from multiple perspectives. In this process, teachers are not only educating students, but also themselves. Everyone is a participant in this process, and every decision made by teachers affects the future of students. Therefore, teachers must always take the comprehensive development of students as the starting point, follow the principles of fairness, respect, and guidance, and use wisdom and love to explore and implement the most suitable management strategies and educational guidance mechanisms.

5. Conclusions

The management of students' daily behavior norms and the development of education and guidance mechanisms are important components of school management, playing an important role in cultivating students' behavioral habits and moral literacy. However, there are some problems in practical operation. By clarifying behavioral norms, strengthening enforcement efforts, and establishing effective guidance mechanisms, these issues can be effectively addressed, school management levels can be improved, and students' comprehensive development can be promoted. I hope that the exploration in this article can provide some reference and reference for school administrators.
